

2nd Announcement and call for papers
International Workshop on
Plasmonics and
Applications in
Nanotechnologies

Singapore, December 5-7, 2006

Co-Chairs:

Prof. Boris Luk`yanchuk **Data Storage Institute, A*STAR, Singapore**

Dr. Hong MingHui **National University of Singapore, Singapore**

Prof. Alain Dereux **l'Université de Bourgogne, France**

Plasmonics is the field of science and technology related to optics of metallic nanostructures (nano-optics), which involves surface plasmon (SP) excitations. Topics include optics of nanostructured metallic surfaces, SP-enhanced transmission through subwavelength apertures, optics of small metallic particles or clusters, surface plasmon propagation on structured surfaces, building ultra-small waveguides, highly efficient sensors and other integrated optical devices. During workshop meeting, we are going to discuss the following topics:

- Near-field imaging of surface plasmon-polariton
- Stimulated emission of surface plasmons
- Surface plasmon polariton band-gap structures
- Surface plasmon propagation
- Resonant transmission of light through subwavelength Holes
- Applications in data storage technologies, nanotechnology, biotechnology etc.
